SUMMARY

- Proficient in project management, covering requirement analysis, foundational structuring, and project execution.
- Skilled in defining project scope, establishing frameworks, analyzing requirements, overseeing project timelines and milestones, and implementing the MVC framework.
- Experienced in employing methodologies such as Agile, Scrum, and DSDM Atern.
- Known for effective team collaboration, quick problem-solving, risk mitigation, and a resilient, self-motivated approach, even under pressure.
- Successfully managed a variety of projects, including auction control management, queue management, payment integration, E-commerce and CMS website development, as well as static and dynamic websites for various devices, mobile and web API, and REST API development.
- Additionally, possess a strong background in security measures, encompassing attack prevention, OAuth, OAuth2, network security, and cryptography.
- Creativity serves as a valuable asset in devising innovative solutions.
- Proficient in Linux and Windows operating systems, with experience managing cloud servers, particularly on Digital Ocean and AWS platforms.

PROJECT EXPERIENCE

Auction

Web application

Technologies- PHP Laravel, Bootstrap, Javascript, MySQL

- Developed a responsive dynamic website featuring user authentication, CRUD operations, content management, platform security, real-time updates, and integrated with Banking APIs for payment processing.

Responsibilities: Providing flowchart, database structure, code pattern, github workspace, frontend and backend development, and server deployment.

Queue Management System

Cross-Platform

Technologies- PHP Laravel, Tailwind, Javascript, Flutter, SQLite

- Implemented a Queue Management system, optimizing customer flow and service efficiency by intelligently organizing and monitoring queues in real-time including individual or group tickets, automatic time allocation for separate department sector, and ticket management.

Responsibilities: Providing flowchart, database structure, code pattern, github workspace, frontend and backend development, APIs, and server deployment.

Voting System

Web application

Technologies- PHP Laravel, Bootstrap, Javascript, MySQL

- Developed a responsive web application facilitating election voting, including election management, candidate entry, question entry, voter management, distribution of voting links via SMS or email, generation of voting slips, voting result tracking, and analysis charts.

Responsibilities: Creating detail flowchart, designing database structure, code development, deploying servers, documenting processes, creating user manuals, and conducting training sessions.

Location Indicator System

Cross-Platform

Technologies- PHP Laravel, Bootstrap, Javascript, Flutter, MySQL

- Architected the Backend System for a Mobile application indicating car workshop details through Google Map navigation, nearest location of car workshop, and integration with lucky draw system for their customers.

Responsibilities: Taking responsible as backend developer to adapting user requirements and enhancing system performance through customer interactions.

Lucky Draw System

Web application

Technologies- PHP Laravel, Bootstrap, Javascript, MySQL

- Executed the implementation of a Lucky Draw System for Heineken Myanmar, including price entry, candidate entry, responsive user interface, and real-time updates.

Responsibilities: Creating detailed flowcharts, designing the database structure, establishing efficient code patterns, actively participating in development processes, and overseeing server deployment.

Others

- E-commerce website
- Geo-tracking web application for covid patients
- AI chatbot website
